VOLUME 11, ISSUE 1

SUMMER/FALL 2009

A NEW LOOK

Witt Lining Systems has just finished updating our look. Along with an updated logo and letterhead we have updated all of our literature.

The new literature can be accessed from our website in PDF format. To serve you better, our literature will now be more industry specific. Currently available is literature on Metal Finishing, Mining, and Food and Agriculture.

Also available are application sheets on secondary containment

and skirts for chrome plating. We also have a new general brochure and continue to offer spec sheets on our materials.

Watch the literature page for additions including: an updated clip sheet, copies of our warranties, installation instructions, and repair instructions.

Feel free to print the literature or forward it electronically as you need. Please note that all of our literature is copyrighted.

To view and download the new literature visit our web site at www.wittliners.com and click the literature link at the top of the page.

Our web site is also in the process of being updated. New links will coordinate with our new literature format and some of our tabs will change to be more industry specific. Watch for those changes to occur in August and early September.

WE CAN LINE ANYTHING.

From the Desk of Jeff Raymond

Just as we have changed our corporate look, the look of our LFP Teflon has been updated as well. If you have seen one of our liners for hard chrome tanks recently, you may have noticed that the LFP material we use for skirts has changed from its naturally white color to a blue color.

When the material was first produced we found that the added color could be attached by the

chemicals in the tank and leave microscopic holes in the material. These holes don't pose any problem when the LFP is used as a skirt material, but for our other LFP applications it was an issue. So, we had the LFP developed for us without the color - left in its natural state.

Since that time, advances in the industry have allowed the LFP to be produced with color in a

manner that won't allow the color to be attacked. The added color makes for a more aesthetically pleasing liner without changing its chemical inertness or temperature resistance. LFP remains a great choice for extending a liner's service life in hard chrome plating.

NEW PRODUCT

Witt Lining Systems is expanding on our success with Koroseal® drop in tank liners by now offering High Performance Koroseal® drop in liners.

High Performance (HP) Koroseal® is a proprietary compound formulation that has significantly reduced plasticizer mobility and extraction rates over the standard Koroseal® formulation. This improved formulation results in an even longer service life than

the standard Koroseal® provides. The use of HP Koroseal® also allows improved performance in the harshest of corrosive environments and raises the high temperature limit to 215^o F.

HP Koroseal® is currently available in 3/16 in. gauge. For more information see our website at www.wittliners.com and feel free to contact us for material samples.

Newsletter Distribution Update

We will now be distributing our **HeadLiners** newsletter by electronic methods only. The newsletter will be sent by e-mail in PDF format and will also be available on line at our website at www.wittliners.com. Just click the “news” link at the top of the main page. If you know of anyone that would like to receive our newsletter please forward their email or have them contact us directly. You can also sign up to receive our newsletter on the web site.

PIGSKIN PROPHETS

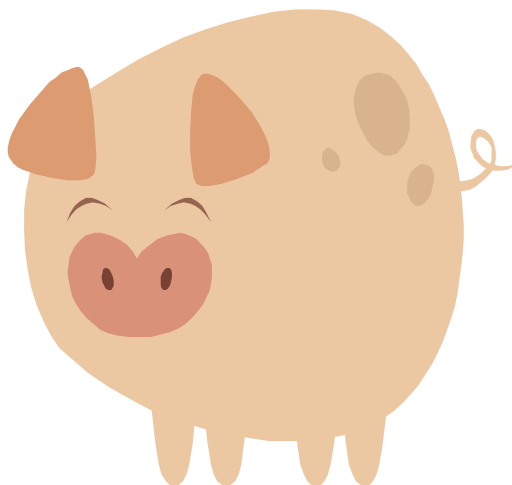

We return this year with our picks for Super Bowl XLIV in Miami.

Andrew - Tennessee Titans
Jeff - Chicago Bears
Marcy - Indianapolis Colts
Michelle - Dallas Cowboys
Kevin - New England Patriots

Did you know...

...that humans and pigs are the only animals that can be sunburned?
