

We can line anything.

Your Solution to Secondary Containment Problems

Choosing the wrong secondary containment product can be a catastrophic mistake.

Concrete containment areas are always subject to cracking. Besides the immediate cost of a coating system (sandblasting, application, curing, etc.), coatings will always have the issue of weak points and failures when bridging cracks in the concrete. A cracked coating is a failed system which leads to costs associated with remediation and legal liability plus replacement and repair costs.

Witt liners are a proven alternative for lining concrete areas. Our flexible PVC liners are custom made for floors, pits, trenches, berms or any containment areas. By not being bonded, Witt liners will never be subject to failure due to cracked concrete.

Witt Liners require minimal concrete prep. Downtime for installation is considerably faster than a coating and do not require cure time. Once a Witt liner is installed, you can get back to business with a worry free containment system.

Full turnkey installation or supervision is available through our international network of certified and authorized installers.

Witt Lining Systems... the best choice for you!

- 45+ years of commitment to industrial lining solutions
- Dedicated to industrial liners only – no ponds, lagoons, pools, etc.
- Innovative product ideas and fabrication techniques
- Honored by US Dept. of Commerce
