Application – Water, Wastewater, Food & Agriculture

Witt Lining Systems

Flexible PVC liners are essential for protecting tanks, pits, sumps, and containment structures used throughout the water, wastewater, food-processing, and agricultural industries. These environments expose equipment to constant moisture, corrosive chemicals, washdown cycles, and biological activity—conditions that rapidly degrade coatings and bonded linings. Witt's engineered drop-in liners provide a durable, cost-effective alternative to these traditional systems, delivering long-term corrosion protection and reliable liquid containment.

Witt liners are used in municipal water treatment, industrial wastewater systems, food-grade processing areas, agricultural chemical storage, cooling towers, and anywhere predictable containment is required. Our materials—including **Koroseal®** and **Spectra Blue®** are selected for flexibility, chemical resistance, and performance across a wide range of water and food-related applications.

For projects requiring specialized materials, Witt also fabricates liners from **Teflon®**, **XR-5®**, and other NSF certified materials ensuring compatibility with aggressive chemicals, elevated temperatures, and unique process conditions. With multiple grades and thicknesses available, each liner is engineered to match the specific demands of the installation.

Whether you're lining potable water tanks, wastewater treatment pits, food-processing basins, or agricultural containment systems, Witt Lining Systems provides custom-fabricated solutions that install quickly, perform reliably, and extend the service life of critical

WITT LINING SYSTEMS...

the best companies use the best companies.

- 45+ years of commitment to industrial lining solutions
- Dedicated to industrial liners only – no ponds, lagoons, pools, etc.
- Innovative product ideas and fabrication techniques
- Honored by US Dept. of Commerce

witt lining systems

We can line anything.
