

NSF-approved materials engineered for cooling, storage, and chemical treatment systems.

THE CHALLENGE

Water systems are critical to data center performance. Cooling tower basins, make-up water tanks, chemical treatment systems, and wastewater basins all rely on dependable containment to keep operations running.

Traditional coatings can require extensive surface preparation, curing, and future maintenance. Tight construction schedules and retrofit projects leave little room for those delays.

THE WITT APPROACH

Witt Lining Systems manufactures custom drop-in liners engineered to the exact dimensions of every tank, including rectangular, cylindrical, and complex geometries.

NSF-approved material options support projects where water quality documentation matters. Factory fabrication minimizes field variability, and installation typically takes days with no curing required.

For distributors, EPC firms, integrators, and engineers, Witt delivers a containment solution you can specify with confidence.

WHY SPECIFY WITT

NSF-APPROVED MATERIALS

Specify with confidence using NSF-approved material options supported by the documentation required for water system applications.

ENGINEERED TO EXACT SPECIFICATIONS

Every liner is fabricated to the exact dimensions of its tank with one-eighth-inch tolerance, creating a precise fit engineered for long-term performance.

FASTER INSTALLATION

Drop-in liners install in days, not weeks, with no curing and minimal surface preparation, helping keep construction and maintenance schedules on track.

BUILT FOR UPTIME

Factory-engineered liners reduce field installation variables and provide dependable containment for mission-critical cooling and water treatment systems.

MATCHED TO YOUR APPLICATION

Material options are selected based on each application's chemistry, concentration, operating temperature, and performance requirements.

BUILT FOR NEW BUILDS AND RETROFITS

Whether specifying containment for a new facility or upgrading existing infrastructure, Witt liners support predictable maintenance while helping extend the life of critical assets.

DATA CENTER APPLICATIONS

Cooling tower basins • Make-up water storage tanks • Chemical dosing and treatment tanks
Wastewater equalization and holding basins • Sumps and trenches • Secondary containment
